

## **Use Ordinary Tap Water to Kill Flu - When Pigs Fly...**

**Ontario, Canada:** With news about the swine flu pandemic making headlines, Tersano Inc.'s lotus® PRO commercial cleaner makes more sense than ever. Transmitted quickly through personal contact, the swine flu is a mix of pig and bird strains so humans have no natural immunity and new vaccines will take months to introduce.

Using a patented process, lotus® PRO takes only a couple of minutes to turn ordinary tap water into liquefied ozone which wipes out 99.999% of this nasty bacteriophage virus in less than one minute. While deadly to seasonal flu, this powerful liquefied ozone can be safely applied to human skin - even a baby's - without harming live tissue. Three thousand times faster and fifty percent stronger than chlorine bleach, and much more effective than soap or alcohol-based hand commercial cleaners, it safely back to pure water and oxygen after its job is done.

“Our lotus PRO system is already in use in family hotels and long-term care residences, and its consumer counterpart is widely available in North America.” Says Tersano President and lotus inventor, Steve Hengsperger. “It’s unfortunate that it takes something like this to get more people to look at lotus PRO as their 100% green, 100% chemical-free answer to disease prevention.”

Liquefied ozone is FDA, USDA, TURI and EPA approved and is as effective as a commercial cleaner against more than 50 dangerous pathogens including C-difficile, E-coli, MRSA and listeria. It was a TIME Top 10 Inventions of 2006 Winner and featured as Big Idea of the Month by Donny Deutsch.

While most of us don't know it, liquefied ozone has been used on a large scale for well over a century for drinking water purification. Today, many leading consumer brands use it for sanitizing their food and beverage products during the manufacturing process. In fact, chances are the bottled water you drink has been purified using liquefied ozone.

**Tersano Inc. is a privately held innovations company based in Windsor, Ontario, with offices and distribution centers throughout the U.S.A. The company develops and manufactures lotus® and lotus® PRO products for consumer and commercial customers worldwide. The company is committed to advancing environmentally safe and healthy cleaning and sanitizing technologies.**
